## PUSH BACK

- Eliminates wasted aisle space in your warehouse
- Reduces maintenance costs and safety concerns associated with Drive-In systems
- Push Back storage has a 30% utilization improvement versus Drive-In systems
- Push Back storage is the best choice for high density, fast moving distribution in warehouses that can utilize a First In, Last Out (FILO) storage system
- Our captured cart design, which prevents cart lift out by fork truck operators, is one of many integrated safety features unmatched in the industry

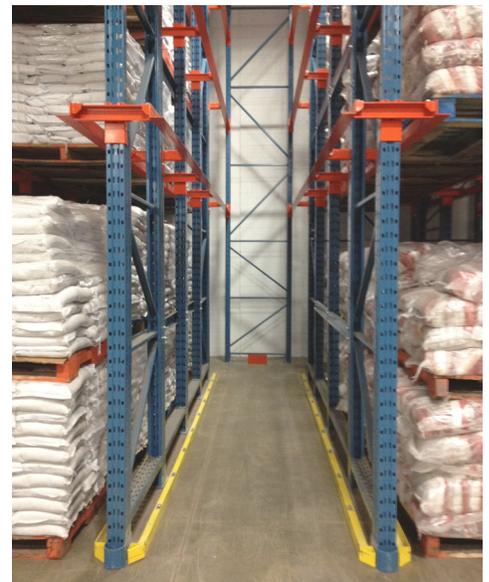

## PALLET FLOW

- Palletrak flow systems are designed for each Pallet Flow application and are engineered to integrate with other material handling systems
- Palletrak maximizes storage density with a flow through gravity fed design, allowing the pallet to flow to the discharge position for removal
- Palletrak is the easiest way to install Pallet Flow due to the no-splice beam mount design
- Industry leading brake features make it the safest and most durable Pallet Flow system on the market
- First-In, First-Out (FIFO) systems are used extensively in feed picking applications

## DRIVE-IN/DRIVE-THRU RACKING

- Ideal for high density pallet storage applications
- Drive-In/Drive-Out racking are unique FIFO, FILO styles of racking that have higher storage densities than any other racking systems
